

SchoolPop — How to Use This Addon

by Mhortai

SchoolPop is an addon for World of Warcraft 3.3.5a (Wrath of the Lich King). It replaces the game's floating damage numbers with better ones — coloured by the **type** of damage — and gives you your own private combat log and a per-fight damage/healing breakdown.

Every number is coloured by its **school** — the type of damage it is:

Colour	School
Yellow	Physical (melee, Crusader Strike, etc.)
Pale gold	Holy
Orange	Fire
Green	Nature
Light blue	Frost
Purple-blue	Shadow
Pink	Arcane
Bright green	Healing

So at a glance you know what kind of hit just landed. Crits are bigger and get ! ! ! after the number. All colours can be changed.

Installing it

- 1 Unzip the file you were given. You get a folder called SchoolPop.
- 2 Put that folder inside your game's Interface\Addons\ folder. If you already have an older SchoolPop there, delete it first.
- 3 Start the game (or type `/reload` if it's already running). A full restart is safest for a first install.
- 4 A small gem icon appears on your minimap — that's SchoolPop.

To check the version, open SchoolPop\SchoolPop.toc in a text editor and read the `## version:` line.

Three ways to open the options

- **Left-click the minimap gem** (right-click opens the Breakdown window).
- Type `/sp` in chat.
- Press **Escape** → **Interface** → **AddOns tab** → **SchoolPop**.

Everything on the panel applies immediately — no reload needed.

The options panel

Checkboxes

- **Floating text** — the numbers that float up from enemies. Turn off if you only want the log.
- **Pet damage** — include your pet's hits.
- **Show healing** — show your heals as green + numbers.
- **Short numbers** — abbreviate big numbers instead of every digit: 1.2K, 56K, 1.5M, and past a million it rolls over to B (billion), T (trillion) and beyond — e.g. 2.5B, not 2500M. The combat-log window always keeps the full, exact numbers.
- **Spell icons** — put the ability's icon next to each number.
- **Over nameplates** — numbers appear above the enemy you hit and follow it. Needs nameplates on (press V).
- **Minimap button** — show or hide the gem.
- **Log window** — open the SchoolPop combat log.
- **ItemID** — annotate each combat-log line with where its proc came from and which of your items carries it.

Dropdowns

- **Font** — twelve fonts (four are WoW's own; the rest are bundled).
- **Outline** — none, thin or thick black edge.
- **Direction** — how numbers move: up, down, sideways, diagonally, static, or **Arc** (a fountain-like throw; the default).

Sliders

- **Font size, Duration, Distance** — size, how long a number stays, how far it travels.
- **Horizontal / Vertical** — the fixed screen position (used when a number isn't over a nameplate).
- **Spread** — how much a burst of hits scatters so they don't stack.
- **Merge** — hits of the same spell within this many seconds combine into one number with x3 after it. Set to 0 to see every hit.
- **Icon size and Icon: Left / Right** — size and side of the spell icon.

Colours

Click any coloured square to change that school's colour. **Reset colours** restores the defaults.

Buttons (centered at the bottom)

- **Reset colours** — colours back to default.
- **Test** — fires a sample of every colour so you can check your settings without fighting.
- **Reset all** — everything back to defaults.
- **Open log** — opens the combat log window (row beneath).
- **Breakdown** — opens the DPS/HPS breakdown window (row beneath).

The combat log window

Tick **Log window** in the options (or /sp log, or the keybinding). A black window lists only *your* combat, one line per hit:

```
Mhortai hits Sethekk Guard with Crusader Strike for 1,234,567!!!  
Mhortai heals Priestname with Holy Light for 87,500  
Mhortai is healed by Judgement of Light for 87,500 (12,000 overheal)
```

Each line is coloured by school; crits get !!!; healing lines show any overhealing.

Title bar, left to right: the **All / Damage / Healing** dropdown (what the log records), **Breakdown** (opens the breakdown window), **Export, ?** (filter — see below), **Opt** (a pop-up with font size, opacity and a timestamps toggle), and **X**.

Along the very bottom is the **DPS / HPS meter line** — your damage and healing per second for the current fight, with the fight length. The **Clear** button at the bottom-right clears the log and resets the DPS/HPS meter in one click.

Moving/resizing: drag anywhere on the window to move it; drag the corner grip to resize. Use the scroll arrows on the right (or the mouse wheel) to scroll back.

Export opens a window with the whole log as plain text, already selected — press **Ctrl+C** and paste into Word or Notepad. (Addons can't write files directly. The same text is also saved to WTF\Account\<your account>\SavedVariables\SchoolPopExport.lua on logout.)

The "?" filter — by ID or name

Click **?** to open the Filter box. Type either:

- **a spell ID** (a number) — the log shows only that proc's lines, and
- **a name** (text) — the log shows only lines whose ability name contains what you typed (proc, talent or skill), case-insensitive.

It filters live as you type, and keeps filtering new lines while the box has a value. Delete the text (or type something that matches nothing) to show everything again. Closing the box clears the filter.

ItemID — where a proc came from

Some of your damage and healing comes from **procs** — effects that fire on their own from your gear, set bonuses or seals. With **ItemID** ticked, the log annotates each line with the proc's source and the item it's imprinted on, in white:

```
Mhortai is healed by Drain Life (Bryntroll, the Bone Arbiter; on Sanctified Lightsworn Shoulderplates)
```

This needs the **Uncapped** addon loaded, since that's what supplies your imprint data. If a proc isn't in the database and isn't imprinted on anything, the line just shows the proc name. (For a full standalone imprint viewer, use the separate **PicoID** addon.)

The DPS / HPS breakdown window

Click **Breakdown** in the options (or /sp breakdown, or the Breakdown button in the log window). It breaks your damage and healing down by source for the current fight, in two tabs:

- **DPS** — every ability, spell and proc you dealt damage with this fight.
- **HPS** — the same for your healing.

Each row shows the source's **name with its spell ID in parentheses**, its **Total** for the fight (abbreviated), its **% share**, its **Hits**, and its **DPS/HPS** (per-second rate). Rows are sorted highest-total

first and coloured by school. A footer shows the fight total and overall per-second.

Each proc is its own row. Procs are grouped by spell ID, so the several different "Drain Life" procs each get their own line — the ID in parentheses tells them apart: Drain Life (71838), Drain Life (34107). Melee swings are grouped into a single **Melee** row.

Only your damage counts. The breakdown includes only what **you** or **your pet** did — your attacks, spells, talents, procs and melee. Ground effects, boss debuffs and other things you didn't cause (e.g. Corrupted Ground) are not counted.

The meter and breakdown are cumulative: they keep counting across fights and only clear when you hit Reset (or the log's Clear button). The clock starts on your first action after a reset and keeps running. The window has a **Log** button (opens the log) and a **Reset** button (clears the current fight — breakdown, meter and log). Drag to move, corner grip to resize, and close it with its **X**, the minimap right-click, the Breakdown button, or /sp breakdown. (It deliberately does **not** close on Escape, so it stays put when you lose control of your character.)

Keybinding

Escape → **Key Bindings** → **SchoolPop** → **Toggle log window** — assign a key to flip the log on and off mid-fight.

Slash commands (everything is also in the panel)

Command	What it does
/sp	Open the options panel
/sp float	Floating text on/off
/sp heal	Healing text on/off
/sp pet	Pet damage on/off
/sp log	Log window on/off
/sp breakdown	DPS/HPS breakdown window on/off
/sp logfont 14	Log window font size
/sp test	Show a sample of every colour
/sp reset	Everything back to defaults

Any message the addon has for you appears in the log window, never in your normal chat.

Common questions

The numbers aren't over the enemy. Nameplates must be on — press **V** (Shift-V for friendly plates, for healing).

I see x3 after a number. That many hits of the same spell landed within the merge window and were combined. Set the **Merge** slider to 0 to see them separately.

Numbers overlap. Increase **Spread**, or turn on **Merge**.

The breakdown shows something I didn't cast. It shouldn't — the breakdown only counts your own and your pet's damage. If you still see a stray source, tell me its name and ID.

The DPS/HPS column looks cut off. Widen the window a little, or it may just be scrolled — the per-second value is the rightmost column.

The addon doesn't load. Check the folder is exactly `Interface\AddOns\SchoolPop\` and contains `SchoolPop.toc`, `SchoolPop.lua`, `SchoolPop_ProcDB.lua`, `SchoolPop_DropDB.lua`, `Bindings.xml` and a `Fonts` folder. At the character screen, click AddOns and make sure SchoolPop is ticked; if it says "out of date", tick **Load out of date AddOns**.

I want to see Lua errors. Type `/console scriptErrors 1` once — the game hides them by default.

Where's my exported log? Paste it from the Export window, or after logging out look in `WTF\Account\<your account>\SavedVariables\SchoolPopExport.lua`.

Version history

See `CHANGELOG.txt` inside the SchoolPop folder for the full list of changes.
